

Download Best Manual Transmission Fluid For Bmw

BMW DIY – Manual Transmission and Differential Fluid Change How To. Both plugs are internal hex (Allen type). The drain plugs on early BMWs are removed using a 10mm hex tool; most later BMW drain plugs require a 14mm hex tool (see our 10mm, 14mm, 17mm shorty hex tool kit). In most applications, two quarts of fluid will be required,...Inexpensive manual transmission fluid that provides a reduced friction level versus other similarly priced fluids. Pros Transmission fluid that meets all requirements for Honda vehicles, but may be used on any vehicle. Empty the transmission oil when the car is still warm, as it will drain easier. For this task, have a drain pan capable of handling at least 5 quarts of transmission oil. As you go, check the fluid in the pan for any unusual metal pieces or grit in the oil. While the fluid is emptying, clean out the drain plugs. Pentosin MTF2 is the proper fill for your car. It doesn't get much better than this fluid. It is the OEM fluid for less cost. Redline MTL, even though it is a 70W-80, it about 60% THICKER than what your transmission came with. I would only run that in your car if you were going to drive it really hard.
